

Understand Needs: Ux Research Analysis and Synthesis

2

The chapters in Part 2 address the Understand Needs lifecycle activity, which is used to learn as much as possible about product or system being designed, including the business domain, users, work practice, work domain, usage, and the overall subject matter, including work roles, challenges in current practice, breakdowns and workarounds, inefficiencies, constraints, regulations, culture, and so on. In part 2, we describe all of this and more in these chapters:

- *Chapter 6, UX research data gathering*
- *Chapter 7, UX research data analysis and synthesis*
- *Chapters 8 and 9, UX research data synthesis-Modeling*
- *Chapter 10, Connecting to UX design: User stories and design requirements*

These chapters form sections of a bridge from UX research to UX design.
